www.completepayroll.com

Here at Complete Payroll Processing, Inc. our mission is to provide simple and affordable timekeeping solutions. We feel we can better serve our clients by focusing our efforts on building the industries most innovative timekeeping system, and making it available to all businesses, large and small.

The NetClock system was designed with everyday people in mind. It saves you time and money, because it improves payroll accuracy and eliminates the need to calculate time cards or collect data. Our clocks collect payroll punch entries, which are then sent to our server automatically. We then make this information available both to the end user (the client) as well as the accounting firm via fax, e-mail, and the Internet.

Currently we are based in the Genesee Valley area of beautiful New York and we appreciate your business! In fact, we pride ourselves on being reliable, knowledgeable, friendly, hard-working, and honest. Our reputation is extremely important to us, so much so that over 75% of our customers over the past 3 years have been "referrals" from happy customers! The most important form of advertising we can invest in is "you" the customer, therefore we guarantee absolute satisfaction on every service and product we offer.

A Simple...

NetClock is easy to set up - just plug it in. It's easy to use, just punch in and out with the push of a button and swipe of a card. There is NO software to install, simply view, edit, and run reports using your web browser. NetClock's web based service automatically does all the collecting, calculating, processing, and reporting in an effective and efficient manner.

Affordable...

Studies have shown that automated payroll calculation cuts preparation time by up to 80%, saving you time and money. NetClock has designed an automated payroll system for the small to mid-size business. Our products and services are reasonably priced because we understand that there is a need for a cost effective time and attendance service. We offer proven brand-name equipment, FREE upgrades, and FREE daily e-mail reports. Best of all, there are NO hidden charges for features that our competitors normally charge for.

Timekeeping Solution!

We are a service-oriented business specializing in time and attendance. Our web-based service provides the tools needed to effectively manage payroll concerns for companies, large and small. This is accomplished by providing a service that works with each company's individual needs. Businesses throughout the U.S. and Canada have turned to NetClock as a "makes sense" solution to their time and attendance needs.

Effortless Reporting

NetClock offers several ways for you to receive payroll reports from the system. You can retrieve reports online, and print them at your convenience.

You can request that an e-mail report be sent to you (or other supervisors) each morning. The daily e-mail report can contain information about your entire staff, or the system can "filter" the report so that individual supervisors only receive information about the employees they're responsible for. You can also request full-color Excel spreadsheet reports to be sent to your e-mail address for record-keeping purposes.

There are four types of online reports you can retrieve from the system. The "Online Summary Report" generates the total hours worked, total gross wages, and type of pay for each employee. The "Online Detail Report" generates an in-depth listing of when employees clocked in and out, and shows total hours worked. The "Single Day Summary Report" shows a list of employees who clocked in and out on a single day including total hours for that day and for the week to date. If you're using labor codes to track employee activity, you can use the "Job Code Report" to determine the number of hours and/or dollars spent on specific jobs, or in specific departments.

Our Zero Maintenance Guarantee

When you buy NetClock, you're also buying high quality equipment with a warranty. The NetClock time clock hardware is made by Verifone, a division of Hewlett Packard. This is the same proven name-brand hardware used by the banking industry for credit card processing. We've simply programmed the unit to perform like a time clock. Therefore, we can offer a high quality time clock for about the same price as a credit card machine. We can also upgrade the software inside the clock and add new features right over a phone line. The NetClock 330/380 has been designed so no additional maintenance is required. In fact, we are so confident that we offer a no-hassle warranty that lasts as long as the clock is connected to NetClock! Call us now for a live demonstration.
